

Safe-Hit[®] Sno-Post[™]

BOUNDARY MARKERS

Safe-Hit® Sno-Post™

The Safe-Hit® Sno-Post™ Boundary Marker is an efficient, affordable replacement for traditional snow posts – painted wooden sticks, skinny fiber poles, or expensive delineator posts. The marker is made of 3 components: a 36" post constructed of flexible, durable polyethylene with ultraviolet inhibitors, a 12" anchor made of high impact polystyrene, and one of four fastener options.

The Safe-Hit® Sno-Post™ Boundary Marker is designed to provide increased visibility compared to traditional skinny sticks. Available in two diameters, the post is topped with bright, retroreflective sheeting to help increase visibility to snow plow operators and other motorists. The Safe-Hit® Sno-Post™ is ideal for marking boundaries or specific locations, and can be installed in areas with low to moderate density soil. A drive tool attachment is available for use with the Safe-Hit® Post Driver.

SPECIFICATIONS

36" TALL POST, 3" REFLECTOR AVAILABLE IN TWO WIDTHS

- 1.75" (medium) black
- 2.25" (large) multiple colors

12" PLASTIC ANCHOR

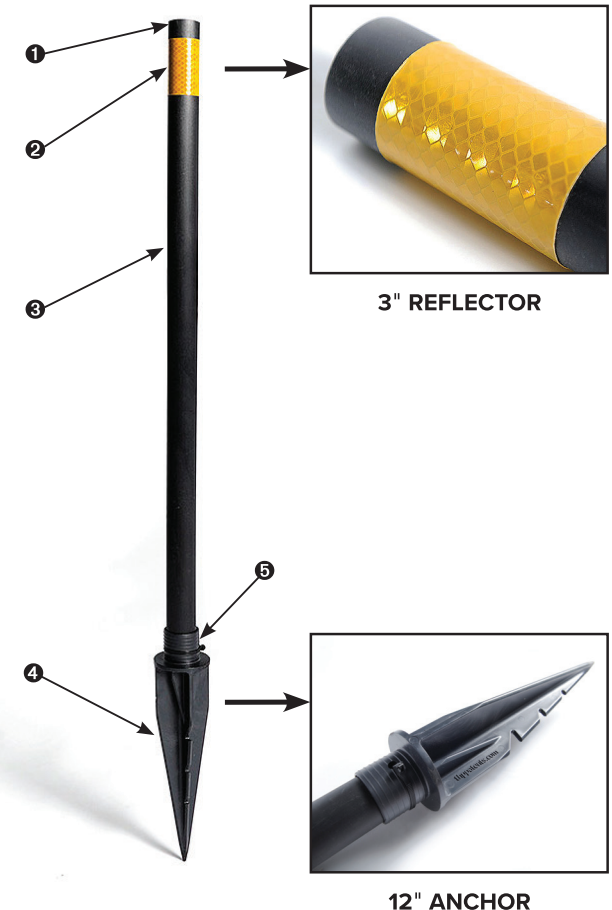

- High impact polymer
- Structural support fins
- Drive tool attachment available for use with the Safe-Hit® Post Driver for easier installation.

FASTENER OPTIONS

- Tie wrap (standard)
