

Yodock® Construction Solutions

BARRICADES

Yodock® Construction Solutions

Valtir Rentals offers a full line of construction site products centered on the patented, water-filled Yodock® 2001, 2001M, and 2001MB barricades.

Yodock® barricades are made in the USA and tested to NCHRP Report 350. The barricades can be assembled to meet a variety of construction site needs including traffic control, perimeter fencing, temporary sign support, work zone barricade, and pedestrian walkways.

Yodock® barricades are a convenient alternative to other channelizing devices and when ballasted by water are less susceptible to movement by wind, pedestrians, or motorists than temporary chain-link fences, drums, and cones. Interlocking sections can be configured to accommodate multiphase projects and various terrains. Flexible rental options can help reduce capital costs and storage concerns over time.

FEATURES

- Lightweight units for convenient positioning by hand.
- Stackable for more efficient transportation and storage.
- Convenient forklift access for maneuverability.
- Custom colors are available

FHWA ELIGIBILITY

- Longitudinal Channelizing Device (LCD)
- Work Zone Barricade
- Temporary Sign Support

Construction Site Containment
